I have been working as a Software Engineer for 6 years in FinTech sector and as an Application Security Engineer / Security Advisor for the last 2 years. Sphere of my professional interests consists of Threat Modeling and Security requirements analysis practices, enrichment the tools like SAST and WAF with custom rules according to the project security risks, embedding the security practices into application development with security unit / integration tests and code review. My last-time responsibilities also include architecting the applications with security in mind and improving company SSDLC processes.

Last Work Experience
